Nmap Scan Report

Target: sushilphuyal.com.np

Scan Options: -sS

Scan Results Explained:

Host: 168.119.138.253

Status: The host is up. This indicates that the device is reachable on the network.

Open Ports:

- Port 20 (closed): This port is running the ftp-data service, typically used for general network communication.

- Port 21 (open): This port is running the ftp service, typically used for file transfer.

- Port 22 (open): This port is running the ssh service, typically used for secure shell access.

- Port 23 (closed): This port is running the telnet service, typically used for general network communication.

- Port 53 (open): This port is running the domain service, typically used for general network communication.

- Port 80 (open): This port is running the http service, typically used for web servers.

- Port 110 (open): This port is running the pop3 service, typically used for general network communication.

- Port 143 (open): This port is running the imap service, typically used for general network communication.

- Port 443 (open): This port is running the https service, typically used for secure web servers.

- Port 465 (open): This port is running the smtps service, typically used for general network communication.

- Port 587 (open): This port is running the submission service, typically used for general network communication.

- Port 993 (open): This port is running the imaps service, typically used for general network communication.

- Port 995 (open): This port is running the pop3s service, typically used for general network communication.

- Port 3000 (closed): This port is running the ppp service, typically used for general network communication.

- Port 8443 (closed): This port is running the https-alt service, typically used for general network communication.

- Port 50000 (closed): This port is running the ibm-db2 service, typically used for general network communication.

- Port 50001 (closed): This port is running the service, typically used for general network communication.

- Port 50002 (closed): This port is running the iiimsf service, typically used for general network communication.

- Port 50003 (closed): This port is running the service, typically used for general network communication.

- Port 50006 (closed): This port is running the service, typically used for general network communication.

- Port 50300 (closed): This port is running the service, typically used for general network communication.

- Port 50389 (closed): This port is running the service, typically used for general network communication.

- Port 50500 (closed): This port is running the service, typically used for general network communication.

- Port 50636 (closed): This port is running the service, typically used for general network communication.

- Port 50800 (closed): This port is running the service, typically used for general network communication.
